EXPERIENCE

Deepcytes Cyberlabs, UK

June 2024 – December 2024

OSINT Investigator and Analyst

- Engaged in comprehensive information gathering and data collection across the surface web, deep web, and dark web, utilizing various tools and methodologies for effective data extraction and analysis.

SKILLS

Languages: Python, C++, Java, C

Frameworks: Next.js, Node.js, FastAPI, Flask, Django

Databases: SQL, MongoDB, Postgres

Libraries: pandas, OpenCV, HuggingFace, Tensorflow, Pytorch, Faiss, Pyspark

Deployment: AWS, Streamlit, Render, Vercel, Docker

PROJECTS

Prepnudge | *Next.js, MongoDB, AI/ML, Blockchain*

<https://prepnudge.vercel.app/>

- Engineered a full-stack placement-prep platform used by 500+ students, offering 38% faster interview readiness through centralized senior interview logs, real-time domain/company chatrooms, and LinkedIn-scraped profile insights for data-backed preparation.
- Built an adaptive OA Practice Engine delivering MCQ difficulty calibration with 92% accuracy, real-time scoring, and question-level performance analytics, boosting students' pre-interview test performance by up to 27%.
- Implemented scalable serverless APIs, role-based access, coordinator automation (auto-onboarding from Excel lists), and WebSocket-powered live updates, reducing manual admin effort by 60% and enabling seamless cross-campus expansion.

SakshamOS | *Agentic AI, FinTech, Next.js, MongoDB, Escrow*

<https://sakshamos.vercel.app/>

- Built an AI-powered FinTech OS with autonomous agents (CFO, Hunter, Wealth, Tax, Collections) that automate Smart Split, compliance, proposal drafting, and investment actions, reducing 40 non-billable workload for freelancers.
- Developed a Certainty Platform using secure Escrow, guaranteed payouts, vetted talent scoring, and RBI-AA-aligned financial checks to remove risk for both clients and freelancers.
- Designed dual Freelancer & Client dashboards enabling income automation, project acquisition, escrow tracking, invoice recovery, and trust-graph hiring, while implementing a scalable business model with 15-22% Escrow fees, a 999/month Pro plan, and embedded-finance revenue via AI-guided investments.

NyaySuvidha | *FastAPI, Python, ML, Quantum Security, GIS Maps*

- Developed a unified Conviction Data Management Platform integrating district-level FIR, chargesheet, and judgment data across 30+ districts, enabling real-time criminal justice insights.
- Built AI-driven analytics to identify investigation gaps, predict conviction outcomes with 82%+ accuracy, and auto-flag delays based on a 2-day progression model.
- Implemented automated daily data-sync simulation using authentic legal data formats to ensure system-grade interoperability with CCTNS and CIS, and integrated GIS-based interactive maps to display district-level conviction statistics with clickable insights on case counts, status, and historical trends.
- Engineered a quantum-secure architecture using QRNG, ML-KEM, and ML-DSA, creating a future-proof, tamper-resistant pipeline for sensitive law-enforcement data.
